

Transfer of MP3-CD files

If there is some difficulty taking the files straight from the CD to the mp3 player, it may be easier to copy the files to the computer first. Create a folder on the computer named the title of the audiobook. Click-and-drag/copy+paste the files from the CD to this folder, then from there to the player.

These instructions are meant to serve as a general guideline. For further instructions consult your MP3 player instruction manual.

Step 1: Start the multimedia player of your choice, for example Window's Media Player. The MP3 device likely came with a multimedia player that is suited for a specific MP3 player. You can also use Windows Media Player, a standard multimedia player that is on most computers. For the purpose of simplicity, we will use Windows Media Player as the example as to how to upload music.

Step 2: Attach the MP3 device to your computer.

Step 3: Insert mp3/CD 1 into the disc drive. The mp3/CD will automatically start to play in Windows Media Player.

Step 4: Select [File]>>[Add to Library]>>[Add folder..] to download the audiobook to Window's Media Player library. Select the folder in the disc drive where the audiobook appears, typically (D) or (E). This will upload the entire audio CD content to the Windows Media Player library.

Repeat step 3 & 4 until all mp3/CD's have been uploaded into Window's Media Player.

Step 5: Go to the >>[Media Library] tab which is typically on the right side of the Media Player.

Step 6: Identify (by highlighting with your mouse or choosing Select All) all of the audiobook files that were just added to Windows Media Player Library.

Step 7: 'Right click' on the highlighted text and choose >>[Copy to CD or Device]

Step 8: In the List pane, verify that the items selected to synchronize will fit on the device, as shown in the screen shot. If necessary, remove items from the list.

Step 9: Click Start Sync

MP3-CD to iPod

Using a MP3-CD audiobook with iPod on manual update.

This is probably the quickest and most straightforward way. Since it is basically transferring data files there are slightly different methods of doing it, essentially...

Step 1: Insert the MP3-CD into the computer and open it to view the files, [My Computer]>>[CD drive letter].

Step 2: Open iTunes and connect iPod. In iTunes, browse to the iPod's music, [iPod name]>>[music].

Step 3: Select all files from the CD (ctrl+a) and click-and-drag/copy+paste into [iTunes]>>[iPod]>>[music].

If needed:

In the upper right hand corner of itunes, music screen, are alternate views. The middle button will name the columns across the screen. By clicking on the word Album, it arranges everything in numerical order.
